New Series 92 Output Design

Please note: Effective April 2nd, Asahi/America has made a change to our output on the Series 92, making it a true ISO output. This change does not affect the F07 bolt pattern or the 8mm thread size, but affects the output shaft itself. Previously, the output shaft was a 24mm square that was offset 45 degrees.

Now, the output shaft is a 17mm star drive. We will be shipping these actuators in the next month.
