### (1) General operating instructions

- Operate the valve within the pressure vs. temperature range.
  (The valve can be damaged by operation beyond the allowable range.)

- Select a valve material that is compatible with the media, refer to “CHEMICAL RESISTANCE ON ASAHI AV VALVE”.
  (Some chemicals may damage incompatible valve materials.)

- Bolt (40) torque should be checked before installation, as they may become loose after long-term storage. A periodic check of the valve condition as well as bonnet & flange bolt torque should be made part of preventative maintenance program properly re-tightening the bolts as necessary. It is especially important to re-tighten all bolts during the first shutdown, refer to installation on page 24.

- Do not disassemble the actuator. (Injury may occur.)

- Do not step on the valve or apply excessive weight on valve. (It can be damaged.)

- Make sure to consult a waste treatment dealer to dispose of the valves.
  (Poisonous gas is generated when the valve is burned improperly.)

- Allow sufficient space for maintenance and inspection.

- Keep the valve away from excessive heat or fire. (It can be deformed or destroyed)

- Set valve support on the valve. (Refer to page 13)

- Keep the valve away from places of direct sunlight, water and dust. Use cover to shield the valve.
  (The valve will not operate properly.)

- Do not use AV valves in a place where they may become submerged in water.
  (Submergence will make AV valve fail.)

### (2) General instructions for transportation, unpacking and storage

- Keep the valve packed in the carton or box as delivered until installation.

- Keep the valve away from any coal tar, creosote (antiseptic for wood), termite insecticide, vermicides, and paint.
  (This could cause swelling and damage the valve.)

- Do not impact or drop the valve. (It can be damaged.)

- Avoid scratching the valve with any sharp object

As to the block diaphragm and operating method, refer to pages 2 and 23, respectively.
8) Installation procedure

Necessary items
- Torque wrench
- Spanner wrench
- Bolt, Nut, Washer (For many flanges specification)
- AV gasket

(When a non-AV gasket is used, a different tightening torque instruction should be followed.)

Procedure

1) Set the AV gasket between the flanges.

2) Insert washers and bolts from the pipe side, insert washers and nuts from the valve side, then temporarily tighten by hand.

Caution

The parallelism and axial misalignment of the flange surface should be under the values shown in the following table to prevent damage the valve.

(A failure to observe them can cause destruction due to stress application to the pipe.)

Caution

Avoid excessive tightening. (The valve can be damaged.)
Threaded type (Material: PVC, C-PVC, PP, PVDF)

**Necessary items**
- Sealing tape (A non-sealing tape can cause leakage.)
- Strap wrench (Do not use Pipe wrench.)
- Spanner wrench

**Caution**
Make sure that threaded connections are plastic x plastic.
(Metallic thread might damage the body cap)

**Procedure**

1) Wind a sealing tape around the external thread of joint, leaving the end (about 3mm) free.

2) Loosen the union nut ② with a strap wrench.

3) Remove the union nut ② and the end connector ②.

4) Lead the union nut ② through the pipe.

5) Tighten the external thread of the joint and the end connector ② hardly with hand.

6) Using a spanner wrench, screw in the end connector ② by turning \(180^\circ - 360^\circ\) carefully without damaging it.

   **Caution**
   Avoid excessive tightening. (The valve can be damaged.)

7) Make sure that the O-ring (C) ② is mounted.

8) Set the end connector ② and union nut ② directly on the body without allowing the O-ring (C) ② to come off.

9) Tighten union nut ② on each valve until hand tight.

10) Using a strap wrench tighten union nuts uniformly on each side approx. \(90^\circ - 180^\circ\) turns, 1/4 to 1/2 turns.

   **Caution**
   Avoid excessive tightening. (The valve can be damaged)
Socket type  (Material : PVC, C-PVC)

Necessary items

- PVC or C-PVC cement (Adhesive for vinyl chloride pipes)
- Strap wrench

⚠️ Caution

Do not install a socket type valve where the atmospheric temperature is 5 °C (23 °F) or lower.  
(The valve joint can fail.)

Procedure

1) Loosen the union nut ◇ with a strap wrench.

2) Remove the union nut ◇ and end connector ◇

3) Lead the union nut through the pipe.

4) Make sure the hub part of the end connector ◇ is clean with waste cloth.

5) Apply adhesive evenly to the hub part of the end connector ◇ and the pipe spigot.

⚠️ Caution

Do not apply more adhesive than necessary.  
(The valve can be damaged due to solvent cracking.)

6) After applying adhesive, insert the pipe quickly to the end connector ◇ and leave it alone for at least 60 seconds.

7) Wipe away overflowing adhesive.

8) Make sure that O-ring(C) ◇ is mounted

9) Set the end connector ◇ and union nut ◇ directly on the body without allowing the O-ring(C) ◇ to come off.

10) Tighten union nut ◇ on each valve until hand tight.

11) Using a strap wrench tighten union nuts uniformly on each side approx. 90° - 180° turns, 1/4 to 1/2 turns.

⚠️ Caution

Avoid excessive tightening. (The valve can be damaged.)

**Spigot type** (Material : PP, PVDF)

### Necessary items
- Strap wrench (Do not use the pipe wrench.)
- Sleeve welder or automatic welding machine
- User’s manual for sleeve welder or automatic welding machine

### Procedure

1. Loosen the union nut with a strap wrench.
2. Remove the union nut and the end connector.
3. Lead the union nut through the pipe.
4. For the next step, refer to the user’s manual for the sleeve welder or the automatic welding machine.
5. After welding, make sure that the O-ring (C) is mounted.
6. Set the end connector and the union nut directly without allowing the O-ring (C) to come off.
7. Tighten union nut on each valve until hand tight.
8. Using a strap wrench, tighten the union nut an additional 90° - 180° carefully without damaging it

⚠️ **Caution**

Avoid excessive tightening. (The valve can be damaged.)
(9) Support Setting Procedure

Necessary items

- Spanner wrench
- U-type clamp (with bolt)
- Rubber sheet

Caution

Set the valve support.
(The valve may be damaged because the actuator is heavy.)
Do not subject the valve pump vibrations.
(The valve may be damaged.)

Level plumber

- Using metal insert (Ensert) & U-type clamp
  
  Fix the installation jig (under the valve) and stand with bolts (Refer to page 21)

  Spread the rubber sheet on the pipe and secure pipe with U-type clamp.

- Using U-type clamp (Only Flanged type)
  
  Spread the rubber sheet on the pipe and secure pipe with U-type clamp.

Perpendicular plumber

  Fix the installation jig (under the valve) and stand with bolts (Refer to page 22)

  Spread the rubber sheet on the pipe and secure pipe with U-type clamp.
Diaphragm Valve Type 14 Pneumatic Model Type AN
Diaphragm Valve Type 14 Pneumatic Model Type AN

Necessary items

- Spanner wrench
- Sealing tape (If seal tape isn’t used, leakage may be caused)
- Steel pipe or tube for piping
- Joint for steel pipe or tube

**Caution**

Use compressed air as operating fluid. Don’t use oil pressure and water pressure. (Actuator may be destroyed.)

Use clean, filtered compressed air. (Actuator may not work normally.)

When a steel pipe is used for piping, use the pipe the inside of which is treated to be rust preventive. (The intrusion of rust into the actuator the electromagnetic valve may cause a malfunction.)

Don’t forget to flashing in the screw part of the joint. (A crack and air leakage may be caused.)

Don’t remove the protective plug up until piping. (The intrusion of contaminants and water may cause the malfunction of the actuator.)

Clean the pipe by flashing before piping to prevent the malfunction of the actuator.

**Procedure**

1) Wind a seal tape onto the male screw of the joint with a blank about 3mm (about 2 threads) left at the end.

2) Screw the joint in the piping female screw of the actuator by hand fully.

3) Screw the joint one turn with a spanner wrench.

**Caution**

Avoid excessive tightening. (The valve can be damaged.)

4) Mount a steel pipe or a tube.

Procedure

1) Loosen the three screws used to attach the limit switch cover with a Phillips head screwdriver and remove cover from the limit switch. (The screw is made so that it will not detach from the cover.)

2) Pull and remove protective cap, made of resin, from the cover.

3) Draw a cable through the connector.

4) Strip cable with a wire stripper.

5) Install a crimp-style terminal on the lead wire with a terminal crimping tool.

6) Connect terminal screw with a Phillips head screwdriver according to the internal circuit diagram shown in page 7.

⚠️ Caution

Tighten the screws. (If not, electric leaks or shocks may occur.)

7) Tighten the above three screws with a Phillips head screwdriver to install cover on the limit switch.

Caution
Make sure of the agreement between the power voltage indicated on the solenoid valve and the voltage wiring to be done. (Wiring with wrong voltage may cause the failure in the solenoid unit.)

Procedure

1) Loosen the hexagon socket head cap screws, and remove the cover.

   Caution
   Don’t lose O-ring. (Short circuit or shocks may occur.)

2) Remove the Fasten terminal inserted into coil side and the insulating sleeve.

   Caution
   Insulating sleeve isn’t attached in Faston terminal.

3) Draw the cable through the connector to the cover.
4) Strip the cable with wire stripper.
5) Draw the lead wire through the cover.
6) Install the Faston terminal on the lead wire with a terminal-crimping tool.
7) Insert the Faston terminal into the coil side. And fit the cover.
8) Tighten the cover setting screws to fix it.
9) (The cover can be set with the wire extraction opening turned upward or downward.)
10) Tighten the cable by connector.
(13) Operating Procedure

Automatic (Air) Operating Procedure

Caution

When AV valve is equipped with a solenoid valve, do not leave solenoid valve terminal cover off.
(Contact with the terminal will cause an electric shock.)
Check that the supply pressure of the pressure reducing valve with a filter is 0.4MPa\{4.1kgf/cm²\} or more.
(AV valve may not function.)
Do not increase the set pressure of the pressure reducing valve with a filter is 0.6MPa\{6.1kgf/cm²\} or more.
(AV valve may malfunction.)

Procedure

1) Supply air to the air supply opening.
2) Check that the air supplying side and the stopper [43] position are matching.
3) Stop supplying air.

<For the solenoid valve>

Procedure

1) Supply the air to the solenoid valve.
2) Push the button with a finger, and confirm the action mode shown in the following table.
3) Apply regular rated voltage to the solenoid valve, and confirm the action mode shown in the following table.
4) Turn off the solenoid valve

(14) Adjustment of opening / closing speed procedure

- Double action type

**Necessary items**
- Spanner wrench

**Procedure**

1) Turn right the adjustment knob of the solenoid valve fully.

   - Caution
   - Avoid excessive tightening.
   - (The speed controller can be damaged.)

2) Supply the air to the solenoid valve.
3) Apply regular rated voltage to solenoid valve, and turn left the open side adjustment knob little by little.
4) Turn off the solenoid valve, and turn left the close side adjustment knob little by little.
5) Repeat item 3), 4) to adjust the opening / closing speed required.
6) When the adjustment is finished, fix the adjustment knob with locking nuts.

1) Loosen screw with a flat head screw to remove gauge cover ⑪.

Caution
Do not damage O-ring (A)⑬.

2) Fully open valve by controlling the volume of air.

Caution
When it is impossible to control the volume of air due to power failure, omit step 2).

3) Attach stopper ⑬ with a wrench, and use an allen wrench to loosen screw ⑫.
4) Remove stopper ⑬ while turning counterclockwise.
5) Loosen screw completely with a flat head screw to remove indicative rod ⑭ from the upper portion of the actuator.
6) Shut valve completely by supplying air to it.

Caution
When it is impossible to supply air to the valve due to power failure, omit step 6).

7) Install thrust ring ⑮.
8) Install manual operating shaft at the same position as the indicative rod ⑭.
9) When manual shaft ⑯ is turned with a wrench clockwise, the valve will open and counterclockwise, the valve will shut.
10) Replace manual shaft ⑯ and thrust ring ⑮ with stopper ⑬ screw ⑱ using the reverse procedure insteps 3 ) to 8).
11) Adjust stopper (refer to page 22).
12) Install gauge cover ⑪.
(17) Disassembling method for replacing parts

- Double acting and air to open

**Necessary items**

- Spanner wrench
- Protective gloves
- Safety goggles

**Caution**

Wear protective gloves and safety goggles as some fluid remains in the valve.
(Injury may occur.)

(Disassemble)

**Procedure**

1) Completely discharge fluid from line.
2) Close main valve for air and open bypass valve to discharge air from the actuator.
3) Remove air line.
4) Loosen bolt ◯40 between the body and the actuator.
5) Remove actuator ◯28 or ◯29.
6) Remove diaphragm ◯3 by turning it 90 degrees.
7) Remove compressor ◯6.
8) Remove joint ◯7.

(Assembly)

**Procedure**

Assembly by using reverse procedures on steps 8) to 1).
(As to the body tightening torque, refer to Table 1.)

Necessary items
- Spanner wrench
- Allen wrench
- Driver (flat head screw)
- Protective gloves
- Safety goggles

Caution
Wear protective gloves and safety goggles as some fluid remains in the valve.
(Injury may occur.)

(Disassemble)
Procedure
1) Discharge all fluid line.

   Caution
   Do not damage O-ring (A)⑨.

2) Loosen screws with flat head screw to remove gauge cover ⑩.
3) Fully open valve by controlling the volume of air.
4) Attach stopper ⑪ with a wrench, and use an allen wrench to loosen screw ⑫.
5) Remove stopper ⑬ by turning counterclockwise.
6) Loosen screw completely, with flat head screw, to remove indicated rod ⑭ from the upper portion of the actuator.
7) Tighten screws with a flat head screw to install the rod ⑮ to the same position as the indicated rod ⑯.

   Caution
   Rod for travel stop may loosen if insufficiently tightened ⑰.

8) Install indicated table ⑱ on the upper portion of actuator, and tightens by hand.
9) Put bolt and nut ⑲ in the open adjustment table and screw in using five turns or so.
10) Attach bolt and nut ⑳ with an allen wrench, and use a wrench to tighten up the nut ⑳.
11) Release allen wrench from the bolt and nut ⑳, and firmly install the fitting for travel stop ⑱ on the upper portion of the actuator while using a wrench to turn the nut ⑳.

   Caution
   Fitting for travel stop ⑱ may loosen if insufficiently installed.

12) Completely close valve by controlling the volume of air.
13) Adjust bolt and nut ⑲ to a completely shut position. (refer to page 23.)
14) Close main air valve and open bypass valve to discharge air from the actuator.
15) Remove air line.
16) Loosen bolt ⑳.
17) Remove actuator portion ⑳.
18) Remove diaphragm ⑱ by turning it 90 degrees.
19) Remove compressor ⑳.
20) Remove joint ⑳.

(Assemble)
Procedure
Assemble by using reverse procedures from steps 21) to 1).
(As to the body tightening torque, refer to Table 1 shown on page 25.)

| The solenoid valve is disconnected. | Check the connection again.  
(Refer to page 6) |           |
| Air is not supplied to the solenoid valve. | Supply air to solenoid valve. |           |
| The supply voltage to the solenoid valve is wrong. | Check voltage with a tester and set specified voltage. |           |
| The voltage to the solenoid valve is low. | Close bypass valve by turning the bypass valve knob in a clockwise direction. |           |
| The bypass valve opens. | Turn speed controller’s knob in a counterclockwise direction.  
(Refer to pages 19 and 20.) |           |
| The speed controller’s knob is fully turned in a clockwise direction. | Check the operating pressure. |           |

Fluid leaks from the valve even when the valve is closed fully. | The diaphragm is worn. | Replace the diaphragm with a new one. (Refer to pages 24 and 25)
| The diaphragm or the body is scratched. | Replace scratched parts with new one. (Refer to pages 24 and 25)
| Foreign matter is in the valve. | Disassemble valve to remove foreign matter. (Refer to pages 24 and 25.)
| The operating pressure is low. | Check the operating pressure.
Fluid leaks from the valve. | The bolt between the body and actuator is loose. | Tighten up the bolt to the specified torque. (Refer to page 24.)
| The diaphragm or the body is scratched. | Replace scratched parts with new one. (Refer to pages 24 and 25)
| There is foreign matter between the diaphragm and the body. | Disassemble valve to remove foreign matter. (Refer to pages 24 and 25.)
| The union nut is loosened. | Tighten the union nut.
| The O-ring is scratched or worn. | Replace the O-ring with a new one.
The actuator operates, but the valve does not open or close. | The diaphragm or the joint metal fitting is broken. | Replace broken parts. (Refer to pages 24 and 25.)

### (20) Handling of residual and waste materials

⚠️ **Caution**

In discarding remaining or waste materials, be sure to ask waste service company. (Poisonous gas is generated.)
